Primary Health Care and COVID-19 Vaccine Distribution in Nigeria
This compilation of infographics to portray the state of Primary Healthcare Centres is particularly relevant not only for tracking COVID funds in Nigeria but also to increase citizens’ engagement with government on transparency and accountability issues in the healthcare sector by monitoring and reporting the state of PHCs across Nigeria.

It is no news that the Nigerian healthcare system has worsened in the wake of the pandemic. As the health sector struggles to meet up with the requirements of basic standards, quality and efficiency, FollowtheMoney conducted investigations in Primary Healthcare Centres in 15 States across Nigeria, to assess their readiness to receive and distribute vaccines across the country.

Data collected from 90 PHCs show that infrastructural development requires attention from the Nigerian government. PHCs are highly understaffed and a number of them are not even connected to the National grid and so do not have electricity. Only 62% of PHCs sampled have the necessary facilities to host and administer Covid19 vaccines to community members. 28% of the PHCs do not have access to clean water and substitute by using water from unclean sources such as rain water and wells.

As a part of this discourse, we are calling on governments to make public the implementation plan of procurement and distribution of COVID-19 vaccines.

Thankful to the staff at CODE and Follow The Money that contributed to this body of work.

Details of our work tracking COVID funds across Africa and all resources on COVID intervention in partnership with BudgIT foundation and Global Integrity can be found on www.covidfund.africa.

Hamzat B. Lawal
Founder, Follow The Money

Follow The Money is currently the largest social mobilization & accountability movement in Africa that has advocated, visualized and tracked over USD 15 million for social development across African grassroots communities, directly impacting over 4,000,000 lives. The home-grown Nigerian initiative has chapters in Kenya, The Gambia, Cameroon, Zimbabwe, Liberia, and Malawi where citizens are holding their government to account for improved public service delivery and accountable spending of public funds.

RECOMMENDATIONS
Introduction

In March 2021, Nigeria received 3.92 million doses of AstraZeneca COVID-19 vaccines, the first trench of the expected 16 million doses, according to an announcement made by the Executive Director of the National Primary Health Care Development Agency (NPHCDA), Faisal Shuaib.

Concerned by the condition of the Primary Healthcare Centres (PHCs) where average citizens receive treatment, and where COVID vaccines would be stored and administered, Connected Development (CODE) through its social accountability initiative, Follow The Money, commenced tracking the distribution of these vaccines and assessed the preparedness as well as the quality of Primary Healthcare Centres across the country to receive and administer the vaccines at the community level.

This research was birthed as part of the objectives of the COVID-19 Transparency and Accountability project supported by Conrad Hilton Foundation and Skoll Foundation, currently being implemented by Follow The Money, BudgIT Foundation and Global Integrity across 7 African countries to assess government’s transparency & accountability in the management of COVID intervention funds and support to citizens.

Follow The Money champions in 15 states - Cross River, Yobe, Bauchi, Gombe, Taraba, Abia, Anambra, Imo, Ebonyi, Benue, Kogi, Nasarawa, Plateau, Kebbi, Osun - across the 6 geopolitical zones of Nigeria, assessed the readiness of 90 PHCs to receive, store and effectively administer vaccines with the purpose to equally drive quality standardization of PHCs in Nigeria.

The set of infographics in this publication depict the state of ninety (90) Primary Healthcare Centres and their standard in comparison to the minimum standards set by the National Primary Health Care Development Agency (NPHCDA). The visual representation also portrays the capacity of the PHCs to receive and store COVID vaccines as the yardstick for measuring effective vaccine administration in Nigeria.
After three months of fieldwork and data analysis, Follow The Money discovered that at least 80 percent of the 90 healthcare centres fall below the minimum PHC standard set by the National Primary Health Care Development Agency (NPHCDA), with their grossly dilapidated infrastructure, poor and inadequate staffing, and incapacity to administer vaccines.

Two of every ten facilities do not have any form of electricity; they supplement natural light with lanterns or torchlights. Thirty (30) percent have no access to clean water, thus relying on water from sources like wells and rain water, stored in tanks. With regards to vaccines’ storage and administration, only 56 out of the 90 PHCs assessed have the recommended pharmaceutical fridge to host vaccines. Our research also found that a number of the PHCs received less than 10 vials of COVID-19 vaccine, which brought to question the checklist that informed such numbers for a facility that serves a community of nothing less than one thousand (1000) people.

However, some PHCs have shown effort into providing minimum standard health services. CODE found that the common service denominator amongst all the PHCs is that 90 percent of the facilities provide ante-natal and maternity care, although the absence of sufficient personnel brings into question the quality of care mother’s and babies receive.
PRIMARY HEALTH CARE AND COVID-19 VACCINE DISTRIBUTION IN NIGERIA

- **Personnel**
  - Community Health Officers (1)
  - Junior Community Health Extension Workers (JCHEWs) (6)
  - Health Attendants / Assistants (2)
  - Nurse / Midwives (4)
  - Medical Officers (1)

- **Infrastructure**
  - Detached building of at least 13 rooms
  - Functional separate male and female toilet facilities
  - Water supply within the premises
  - Connection to the national grid & other regular alternative power source

- **Service Delivery**
  - Delivery rooms
  - In-patient Ward section
  - Maternity / lying-in section

Recommendations

CODE recommends that the National Primary Health Care Development Agency (NPHCDA) should set up a strong monitoring and evaluation team, if absent, which would routinely track PHCs to ensure that they maintain the minimum standard as stipulated by the Agency.

The NPHCDA must ensure that all PHCs have the capacity to host, store and administer vaccines.

The health care system must be strengthened to be able to efficiently respond to health emergencies as was the case for COVID-19.
